

## Event Calendar

This Calendar has the following features:

- Associate a floating panel to each day or range of days; the panel will show information related to these dates. Otherwise, you can assign a direct link to a date, so that your website users are automatically redirected to a specified URL when they click on a certain date.
- Floating panels can be shown by either by clicking on the date, or by pointing your mouse on the date (mouse over). You can also associate both links and floating panels to each date, at the same time.
- Each date can have one or more events, which can be differentiated by using independent colours, which you select yourself.
- The information in the floating panels is edited using an HTML Editor, which allows you to format your data to any way you like, quite simply.
- All the administration and visualization is achieved using modern Ajax technologies, which renders this product user friendly and comfortable.

The address from which you can manage your calendar is:

[http://yourdomain/DC\\_EventCalendar/admin](http://yourdomain/DC_EventCalendar/admin)

UserID = as advised Password = as advised

The interface to enter data into calendar is truly simple,

The screenshot shows a web-based interface for managing an event calendar. The window title is 'Event Calendar ADMINISTRATION' with a 'log out' link in the top right corner. The main area is titled 'Add/Edit Event'. It contains a 'Title' field with the text 'This is a sample title'. Below it is a 'Description' field with a rich text editor. The editor includes options for font name and size (set to Arial, 13), font style (bold, italic, underline), alignment, paragraph style (set to Normal), indenting and lists, and insert items (link, image, table). A preview of the text shows: 'This note has been linked to some dates in the calendar. You can add links, bold text, and some formatting.' To the right of the editor is a 'Select Interval' calendar for December 2008. The calendar shows dates from 1 to 31, with the 15th highlighted. Below the calendar is a 'Select Colors' palette with a grid of various colored squares. At the bottom of the form, there are checkboxes for 'Show tooltip on' (set to 'mouse over') and 'Go to the url' (with a text input field and a dropdown set to 'new window'). 'Save', 'Cancel', and 'Delete' buttons are located at the bottom right.

The fields to fill in for each event are:

- **Title:** This is the title of the floating panel with the relevant information.
- **Description:** Contents of the floating panel.
- **Select Interval:** Select a day and a range of days for the event. The first click indicated the first day, the second click indicates the final day.
- **Show Tooltip on ...:** Select, in this field, whether you want the floating panel to be shown when mouse is moved over the cell in question, or only when the cell is clicked on.
- **Goto the URL ...:** If you want your users to be directed to another URL when they click on a certain date, enter the relevant URL in this field. Here you can also decide whether you want that URL to be opened in the same window, or in a new one.
- **Select Colors:** Select the color for the event.

An example of how it is seen on a published website:
